Application of Bayesian truth serum to forecasting, and collaborative discussion

Example of expert-filtering by the meta-knowledge criterion
(from Prelec and Seung, 2008)

Meta-knowledge = knowing what others know

Meta-knowledge score as measured by:

\[ u' = \sum_{k=1}^{m} x'_k \log \frac{x_k}{y_k} + \sum_{k=1}^{m} \bar{x}_k \log \frac{y'_k}{\bar{x}_k} \]
